

NEERU NAYAK

Software Engineer — Computer Science Background

Ernakulam, India | +91 7208691093 | neerusometimes@gmail.com

LinkedIn: <https://www.linkedin.com/in/neeru-nayak-a280b416/>

GitHub: <https://github.com/lamNeu>

Portfolio: <https://my-portfolio-smoky-rho-63.vercel.app/>

ACADEMIC & PROFESSIONAL PROFILE

Software engineer with enterprise experience (Infosys – Apple client) and independent systems development. Strong academic foundation in algorithms, operating systems, computer networks, and cryptography. Currently developing advanced React-based graph modeling systems involving recursive structures and performance optimization. Seeking to extend professional engineering experience into graduate-level computer science study.

TECHNICAL SKILLS

Programming: Java, TypeScript, Python

CS Foundations: Data structures & algorithms, operating systems, computer networks, cryptography

Frontend: React.js, Vite, Tailwind CSS, REST APIs

Systems: Socket programming, asynchronous systems, OBD-II diagnostics

Tools: Git/GitHub, CI/CD, Vercel

TECHNICAL PROJECTS

Node Abstraction & Graph Modeling Assessment (VectorShift) — 2025

React.js, ReactFlow, Dagre

Designed a recursive graph abstraction system with algorithmic layout and optimized rendering for scalable visualization.

Focus: graph modeling, recursion, performance.

Engineering Portfolio Platform — 2025

React.js

Built a modular single-page portfolio using reusable components and responsive architecture.

Live demo: <https://my-portfolio-smoky-rho-63.vercel.app/>

Recipe Finder Application — 2025

React.js, REST APIs

Developed an API-driven application supporting asynchronous search and interactive filtering.

Live demo: <https://recipe-finder-e2lh.vercel.app/>

PROFESSIONAL EXPERIENCE

Independent Freelance Software Engineer — 2012–2016

Architected an Android OBD-II diagnostic system decoding real-time ECU telemetry

Implemented socket-based communication and data parsing pipelines

Delivered end-to-end mobile systems for international clients

Focus: embedded systems, networking, real-time processing

Infosys Limited — Software Engineer

Client: Apple Inc. — 2010–2012

Maintained backend systems supporting Apple Directory Services

Optimized database queries and synchronization processes

Conducted root cause analysis of production bottlenecks

Ranked top 10 in Infosys national engineering training cohort

Focus: enterprise systems, backend performance

EDUCATION

Bachelor of Engineering — Computer Science

Shriram Institute of Technology, Jabalpur — 2006–2010

Rank: Top 1% of Computer Science Department | CGPA: 7.31 / 10.0

Core coursework: Design & Analysis of Algorithms, Theory of Computation, Data Structures, Operating Systems, RDBMS, Software Engineering

Medium of instruction: English

ACHIEVEMENTS

Selected among top 120 candidates from 6,000+ applicants in Infosys recruitment

Ranked top 10 in Infosys engineering training program

Ongoing independent development of advanced software projects
